Subject: Formal Product Complaint - Metformin HCl 500mg Tablets, Batch MET500-0912

Dear Quality Team,

This letter serves as a formal complaint regarding a labeling discrepancy identified in one carton (5,000 tablets) of Metformin HCl 500mg Tablets, Batch MET500-0912, received at our Manila distribution center on 15 July 2026.

Upon receipt inspection, our team found that the secondary carton label was printed in English rather than the Tagalog/English bilingual format required for this market under our registered artwork. The inner blister strips and leaflet were correctly labeled; the discrepancy is isolated to the outer carton for this batch only. No product quality, safety, or efficacy concerns are suspected at this time - this is purely a packaging/labeling non-conformance.

We have quarantined the affected carton and request written confirmation of the root cause, whether other cartons from this batch are affected, and the corrective action planned to prevent recurrence for future Philippines-market shipments.

Regards,

Ramon Cruz

QA Manager, Novagen Life Sciences Inc.
